### **Double Patenting**

1. Claim 1-22 provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claim 1-46 of copending Application No. 09,627,058. Although the conflicting claims are not identical, they are not patentably distinct from each other.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

2. Claims 1-22 rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-46 of the pending parent application 09,627,058. Although the conflicting claims are not identical, they are not patentably distinct from each other because claim 1 is the obvious variation of claim 1 of application 09,627,058, such as “tag data representing parameters of said first color space, automatically converting said original image data into said second color space, converting said converted image data into a visually-perceptible analog thereof. Claim 5 is the obvious variation of claim 11 of application 09,627,058 such as “displaying original image data was generated relative to a first color space by an output device that converts image data of a second color space to a visually-perceptible analog thereof, monitoring the presence of the tag data, presuming, if no tag is received over communication channel. Claim 15 is the obvious variation of claim 32 of application 09,627,058. Such as “having an output device that converts image data of a second color space to visually-perceptible analog of said image data, to display original image data that was generated relative to a first color space, an output device that converts image data of a second color space to a visually-perceptible analog thereof, said output device being operable to convert said original
